RESEARCH INTERESTS

(for more information, see <http://www.uoregon.edu/~bfmalle/research.html>)

- **The folk theory of mind.** The elements of this conceptual framework and the role it plays in broader social cognition, especially people's reasoning about actions and mental states.
- **Intentionality.** How people judge the intentionality of others' behavior; what roles these judgments play in praise and blame and social conflict; the tension between legal and folk conceptions of intentionality.
- **Folk explanations of behavior.** When and how people explain their own and others' behavior and what functions these explanations serve in social perception and interaction.
- **Cognition of mental states.** Principles underlying people's perception of others' as well as their own mental states; cognitive and social processes that underlie mental state inferences.
- **Moral sentiments.** Interplay between affective, cognitive, and conceptual components of moral responses, such as blame, guilt, and shame.
- **Language and theory of mind.** The relationship between language and theory of mind in evolution and development; linguistic structures that codify folk-conceptual assumptions about mind and behavior.
- **Additional topics** of research include the nature and function of human values, consciousness and free will, and cognitive processes underlying prediction.
